# Please noted: On the above step, some of IPhone user can't find the device, how to resolve it?

If you're using IOS14.0 or above, when you connect the device at the first time, please shut-off the cellular data of your phone, then go back to app and refresh it, then you'll find the device come up, after connection was done, you can turn on the cellular data of your phone.

# **REMOTE LIVE FEED SETUP**

Click the setting button->Choose the "WIFI Setting"->Click the" Manage Wi-Fi networks" and choose your home wifi and input your passwords, then click the OK button. Waiting for about 5~10 second. when it shows "online" again, it means the wifi setting is successful.

After this step was done, the second green light will not flashing, it means the camera has been connected to router successfully, then you can watch your home and access the live feed at any anytime from anywhere by your mobile phone (Remote Control)

#### Note:

1.After input your wifi passwords and config the connection, the device will restart automatically and wait for the camera to restart, which will be completed in about 20-40 seconds. During the connection process, please do not shut-off the device manually.

2.When connecting to WiFi, please make sure input the correct WiFi password. If the passwords is wrong, the camera will be offline, then you need to reboot the device and re-pair it.

# **BLUETOOTH SETUP**

Long press the Bluetooth switch to turn on/off the clock Bluetooth. Enter the Bluetooth setting on your phone, search and find the device's bluetooth name "**Amzcev**" and connected it, then you can enjoy great music by this bluetooth speaker, the bluetooth distance is about 10-15m. (**PS**:You could control the voice by your phone or media player)

# **CLOCK SETTINGS**

1. Setting alarm: Long press the alarm switch button to turn on/off. When the alarm turn on, press the alarm switch button one time to set the hour, press two times to set the minute. Press the "+" or "-" button to set the time.

When the alarm goes off, the clock will make a drip sound for 60 seconds. Press any button to turn off the sound.

2. Setting time: Press the "M" button one time to setting the hour, Press the "M" button two times to setting the minute. Press the "+" or "-" button to set the time.

3. Setting the hour system: Press the "+" button one time to choose 24-hour system or 12-hour system. When you choose 12-hour system, the clock would show the AM/PM sign.

# **QUICK TROUBLESHOOTING**

#### What can I do if the camera is offline, shut-down or not working?

Please reboot the device to factory settings, then connect the hot-spot signal and do the Wi-Fi configuration again.

What kind of MicroSD card is required for recording? The camera supports 8G-128GB MicroSD cards. Please use high speed class 10 FAT32 formatted memory card. Note that cards above 32GB come as exFAT, so they need to be formatted as FAT32 using the App.

Why can't use my MicroSD Card for recording? You should format the MicroSD first before using. If SD card is not recognized, just remove the card and re-insert it.

Why can't the camera go online?

- 1. No power connected.
- 2. Check if your router is working properly.
- 3. Weak Wi-Fi signal
- 4. Wrong password in Wi-Fi setting.

Why is remote monitoring glitchy?

You should choose a suitable resolution to watch according to your internet speed.

Why I can't save to my SD card?

Please make sure you have turn-on the SD card recording function in App, and the SD card must be formatted at the first time to use it.

If I forgot my password?

Press and hold the reset camera button (see diagram) for 5 seconds to restore the device to factory setting, then you have to re-connect the Wi-Fi and set a new password.

Reminder:

The default password for the camera is **123456**. Please change your own passwords to ensure the security of your camera
